# The Rubic Cube's Competition in our school

On November 23 rd the Rubic Cube's Competition was organized at our school as an activity connected with learning more about our Comenius partner, Hungary. We all remember that the Rubic Cube was invented by a Hungarian professor of architecture Ernő Rubik in 1974 r.

Because solving a Rubik's Cube in a very short time is highly challenging, only 6 contestants entered the competition. Nevertheless, we were honored by the presence of Tomasz Korzeniewski - the Polish champion in blindfold solving- who agreed to be the judge.

The fastest speedcuber appeared to be **Marcin Bloch** from class 2 A. His best time was 40, 40 s. See if you can beat him!.
The other students came as follows:
2 nd – Krzysztof Bednarski I B
3 rd – Jakub Jarzombek II A
4 th – Kamil Musiał II A
